F 200: Examining a Forensic Image with Autopsy (15 pts.)

What You Need for This Project

- A Windows machine

Installing Autopsy

Install Autopsy in single-user mode, as explained here:

http://sleuthkit.org/autopsy/docs/user-docs/4.19.3/installation_page.html

Troubleshooting

If a box pops up saying "Windows protected your PC", right-click the Autopsy installer file, click **Properties**, and check **Unblock**. Then run the installer again.

Troubleshooting

If the font is tiny when launching Autopsy, right-click the its desktop shortcut, and click **Properties**.

On the Compatibility tab, click "**Change high DPI settings**".

Try various settings. On my system, I got the best appearance by checking the "Override high DPI scaling behavior" box and selecting "System" below it.

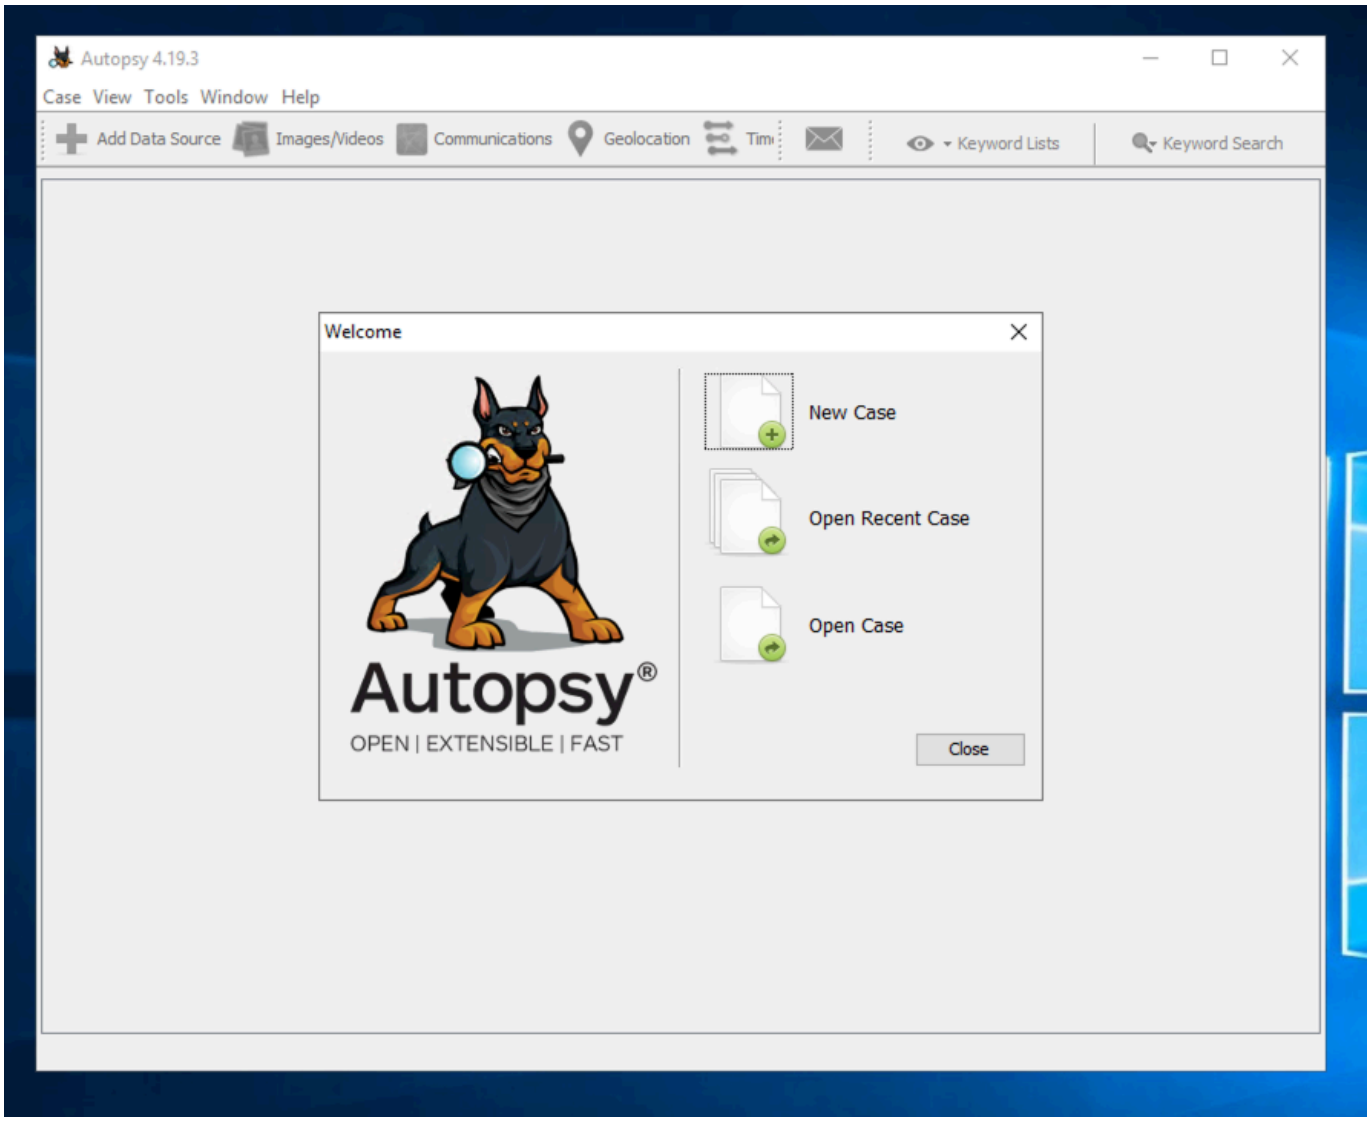

Downloading the Evidence File

On your Windows machine, download this file:

F200.E01

Creating a Case

Launch Autopsy. In the Welcome box, click "**New Case**", as shown below.

Make these selections:

- Name your case **F200**.
- Select your Documents folder and click **Next**.
- Assign it a case number of **F200** and click **Finish**.
- In the "Select Host" page, click **Next**.
- In the "Select Data Source Type" page, accept the default of "**Disk Image or VM File**" and click **Next**.
- In the "Select Data Source" page, click **Browse**, navigate to the **F200.E01** file, and double-click it. Then click **Next**.
- In the "Configure Ingest" page, click **Next**.
- Click **Finish**.

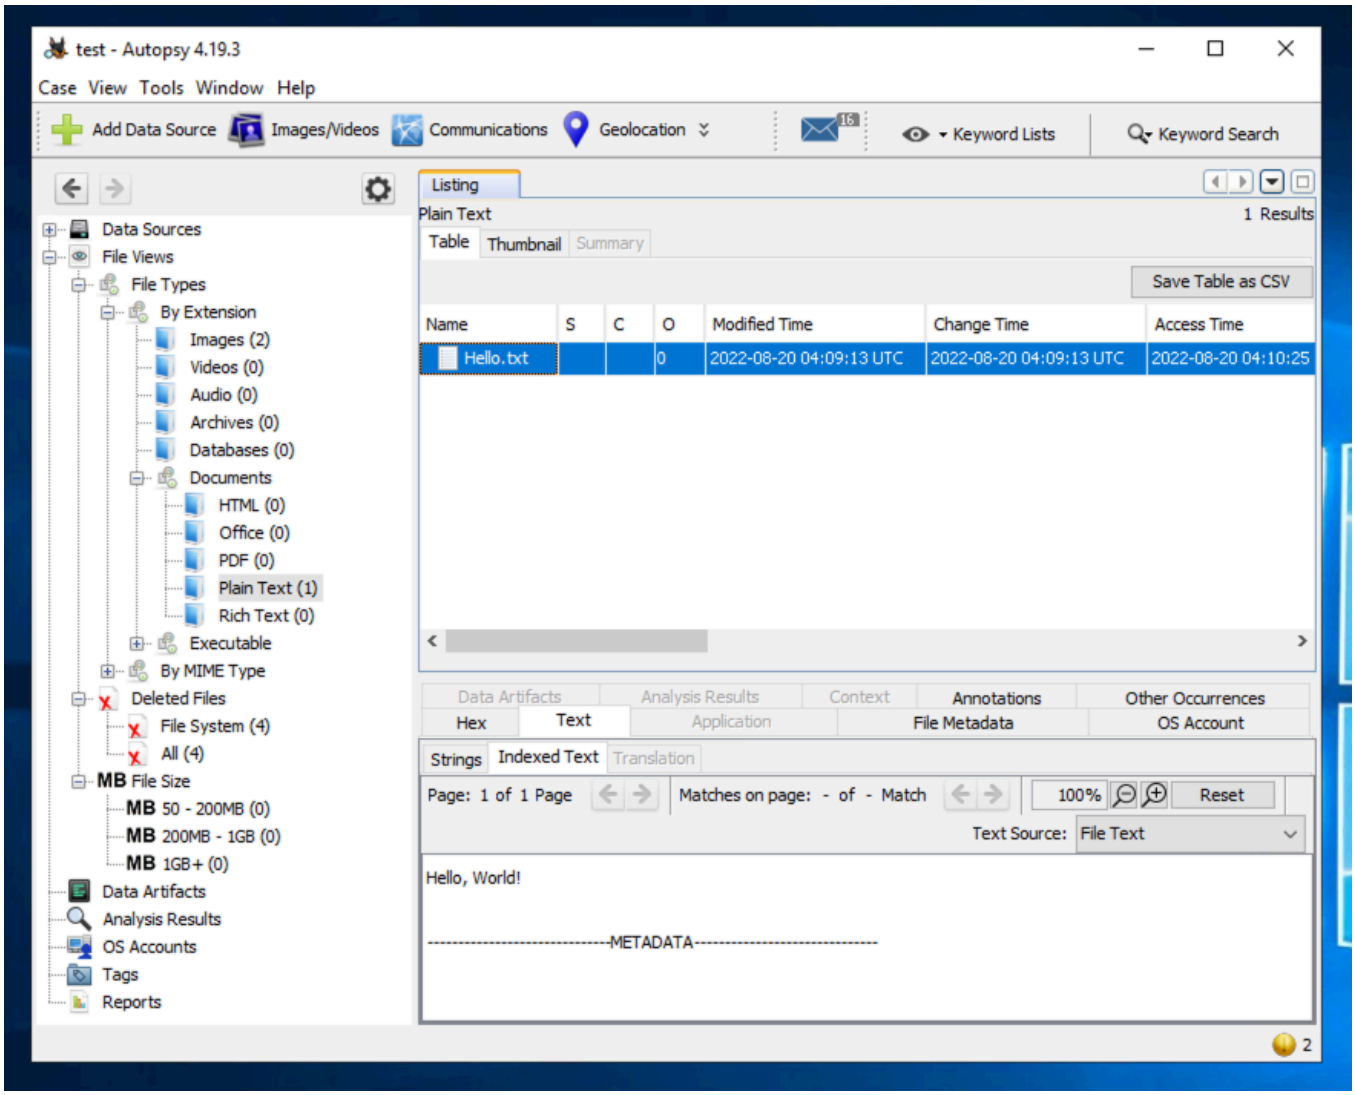

F 200.1: Flag 1 (15 pts)

Use the left pane to explore the data Autopsy found, as shown below.

Do not turn in the image shown below. Instead, examine all the files Autopsy found.

There's a file containing a message beginning with "The flag is".

Find it and capture an image showing the flag.
